

Calming Influence

As the pace of daily life speeds up, our need for a serene, restful environment at home increases. Experts say that having the opportunity to relax and slow down during the day is important for our mental and physical health. Much is also said these days regarding the calming influence of the outdoor environment and the benefits of integrating the outdoors with the indoors.

It's All in the Details

Have you ever fallen in love with a style or space in a magazine ad or seen something on HGTV that made you say, "Wow?" Then in the back of your mind think, "I could never make that work," or "My bathroom could never look like that." Those thoughts crossed our clients' minds, too, before we met with them to discuss their projects.

In Spring Valley, our clients own a very peaceful piece of property, hidden away from the busyness of main roads. They have a love for Celtic and Irish style that they wanted to subtly incorporate into their home. Other important features included a completely tiled water closet from floor to ceiling and a barrier free shower. Increased storage space and a place to sit and dress were also among the criteria for this unique bathroom. Our designer, Beth Spegal, went to work with that information and came up with something truly spectacular.

The intricate, tiny details truly made the largest impact on the look and feel of this bathroom. Our Project Manager, Randy Strandin, took finished carpentry to a whole new level with inset, Celtic crown molding. He also created a perfectly flat threshold between the shower floor and bathroom floor with a piece of gorgeous granite that matched the vanity countertop.

Calming Influence

(continued from page 1)

A striking example of the blurring of boundaries between a home's interior and exterior spaces is found in The New American Home (TNAH) 2013. This demonstration home, showcased at the International Builders' Show in Las Vegas in January, serves as an inspiration for other projects that seek this kind of connectivity, even those on a much smaller scale.

Indoor/outdoor living is a trend that has been sweeping the country and is currently in high demand in both warm and cool regions. For remodelers and builders, the take-away from this home in terms of indoor/outdoor living is the integration of design, along with the blending of interior and exterior materials. As part of the design process, consideration must be given to solar orientation, overhangs, and how best to use glass to invite the outdoors in.

Fashioned in what is termed "desert contemporary" style, this year's TNAH is a departure from the more typical Mediterranean-style found in the Las Vegas area. The use of natural elements throughout—plentiful water, light, air, fire, stone, wood, and greenery—creates uncertainty at times as to whether you are standing outside or inside the home. The glass pocket doors in virtually every room allow you to see straight through the home from inside to outside in many places. Simple straight lines, along with a soft neutral color palette, help create a peaceful setting.

One of the most exciting spaces in this 6,721-square-foot home is the great room and kitchen area. (photo on page 1) These

two rooms are beautifully blended together, unified by a horizontal ribbon of dark wood cabinetry and sunny windows. Although this light-filled space soars two-stories high, the warmth of the cabinetry and other materials provides a cozy atmosphere for dining, watching the game on TV, or sitting poolside.

The master suite, with its open-air sleeping porch, also exhibits the careful blending of indoor and outdoor spaces. Gabions—manmade wire structures filled with regional rock—were used along the interior and exterior walls of the master suite. Resysta—a sustainable product that has the appearance of wooden planks, but is produced from recycled rice husks, salt and mineral oil—was used inside and outside as well. Resysta is so versatile, it was chosen for the floors of the indoor and outdoor master showers, as well as for interior and exterior walls in other parts of the home.

This home was designed as an electrical net zero home, achieved primarily through the combined use of roof-top solar panels, an air-tight thermal shell, energy efficient windows with electronically-controlled shades, and LED lighting.

This is a wonderful period in the history of home design and remodeling in the USA. Finally, we are seeing some real progress made toward the thoughtful, human-centric design of home environments—with products that benefit all people, regardless of their ages or abilities.

For example, in the past, round knobs were the only choice homeowners had for door handles in their homes. Lever handles, on the other hand, function better for a wider group of people. If you have arthritis or other hand mobility issues, you can simply depress the lever handle with your forearm

If your home is multi-storied, there is a good chance you have considered installing an elevator. For a variety of reasons, homeowners across the country are deciding that it is worth the extra expense to alleviate any difficulties in getting from one floor of their home to another. Some reports indicate that the residential elevator market grew by 15% last year.

Baby Boomers are thinking ahead and installing elevators, as insurance that they can continue living in their homes and beloved neighborhoods well into the future. Multi-generational households are putting in elevators for the sake of grandparents who have mobility issues. Families are making it easier to carry heavy or multiple loads to the second or third floors of their homes.

If you are remodeling or building a new addition to your existing home and you want to install an elevator, it should be a part of your design plans from the beginning. Your professional remodeler and elevator supplier will help you determine the state and local licensing and permitting requirements. They will also consult with you about the optimal location for the elevator.

Perhaps you are not planning a major remodeling project—all you want at this point is an elevator retrofit. If there is no suitable space inside your existing

home, the best option might be to build an elevator tower on the exterior of your home.

If you are remodeling your home right now, but you wish to wait until the future to install your elevator, it is still more economical to engineer space for the elevator during the current remodel. By stacking two or more closets directly on top of each other, you will be able to utilize the closets until you convert them into a hoistway later on. The conversion cost will be even less if you allow for a recessed elevator pit in the slab, pre-wire for the equipment, include blocking requirements in the wall, and off-set the doors.

There are three basic types of elevators: hydraulic, traction, and pneumatic. A limitation of pneumatic elevators is that they are usually too small to accommodate wheelchairs. A traction elevator is an excellent choice for a retrofit project, since the drive system is mounted inside the elevator shaft and therefore requires no separate machine room or pit.

In addition to the type of elevator, some of the options that influence the cost of an elevator are the number of stops it can make, the cab size, the type of doors and the interior finishes. If the elevator is being installed due to health issues, speak with a tax professional about tax savings eligibility. ■

Thoughtful Design

or elbow, and the door opens. This is also true if you have a sleeping child in your arms, or a laundry basket, or are carrying groceries into the house.

Manufacturers have begun to rethink the design of their products with the purpose of enabling everyone to use them comfortably and easily. Marvin Windows and Doors showcased several thoughtful products at the International Builders' Show 2013 as a part of an educational Universal Design product tour for remodelers. The following two products were included in the tour:

1

The Low Profile High Performance Sill is available on Marvin's Sliding French and Sliding Patio doors. The attractive flush threshold provides a smooth transition between the exterior and interior, and is ADA compliant.

2

The Ultimate Glider has the handle placed low on the unit in an easy-to-reach position. Challenging top locks have been eliminated. The window features an auto lock that is triggered when the sash is closed.

It's All in the Details

(continued from page 1)

Our recent Miamisburg client also had a dream and a vision for her bathroom, but wanted to accomplish a very different style. When she built her home back in 2003, by the time she picked everything out for her bathroom, she was overwhelmed with decisions. Looking back, she didn't make it exactly the way she wanted it and felt that now was the time to do so.

This mediocre bathroom was in need of a "wow" factor to keep up-to-par with the rest of the custom-built home. Items on her priority list were a larger, more luxurious shower and a tub with jets. The tub and shower areas traded locations in the bathroom and a glass block window was installed to allow natural light to pass through the space. Scott Pierron, our Project Manager, executed an extremely complex tile design that gave this bathroom the spa-like atmosphere that our client always wanted.

Whatever look you desire, whether it's Celtic, French Country, contemporary, or traditional, **Remodeling Designs** can make your dreams a reality. Our clients' had visions for their spaces and the whole Remodeling Designs' team came together to bring their visions to fruition. ■
